

Ressi Acid Itch is a product composed of strong acid buffered by surfactants and anti-foaming. It attacks surfaces with the strength of the acid and removes dirt and grease with the power of a detergent. Applied to concrete, it is designed to open pores of the surface to allow any further processing of painting and floor protection. Its application on tile and clinker is designed to remove dirt and any concentration of lime. It can be used as a cleaner to prepare concrete surfaces that will be treated with Ressi Reactive Stains and appropriate sealers from the Ressicchem range.

APPLICATION

Ressi Acid Itch can be diluted in water, dilution ratio of 1:5 (1 part of **Ressi Acid Itch** with 5 parts of Water). Apply with a floor machine or flooring buffer. Always check that there is no bare metal. Rinse thoroughly with clean water.

COVERAGE

100g/m² of diluted product
20g/m² of pure product

PACKAGING

Ressi Acid Itch is available in 1Ltr, 5Ltr, 10 Ltr, 15 Ltr, and 25 Ltr Packs.

SHELF LIFE
