

# SALT BURSTS

## Salt bursts

**Recommended Solution: Silblock, Silmix and Ressi SBR 5850.**

Trapped efflorescence creates spalls & other damages. **Silblock** can mitigate such kind of serious problems because it diverts all the salt & water down wards towards earth & makes surface dry. **Silblock** is a solvent free siloxane / alkoxysilane emulsion in water. The product is suitable as impregnating agent for masonry including highly alkaline surfaces. It demonstrates good penetration into a variety of absorbent building materials. Please refer to product technical datasheet for further technical information.

**Silmix** is a Siloxane based chemical additive that can be added in mortar and plaster mixes. Silmix along with the use of **Ressi SBR 5850** can ensure long life of the mortar. It is recommended to use 1 Ltr of **Silmix** along with 1 Ltr of **Ressi SBR 5850** with every 50 KG Bag of cement. This treatment will ensure that the issue of salt bursts is minimized, and the life of the mortar / Plaster is enhanced for many years to come. For further information please refer to the product technical datasheets.
